SUMMARY

Entry-level Data Analyst with M.S. Computer Science and hands-on experience collecting and cleaning large datasets, performing **exploratory data analysis**, building **dashboards and reports**, and translating complex findings into clear business recommendations. Proficient in **SQL**, **Python**, **Excel**, **Power BI**, and **Tableau**. Strong attention to detail, organized approach to documentation, and proven ability to communicate insights clearly to both technical teams and non-technical stakeholders.

WORK EXPERIENCE

University of Texas, Arlington

Aug 2024 – May 2026

Graduate Assistant — Data Analytics

Arlington, TX

- Over 60 research projects were producing outputs with no consistent process – data was collected differently by every team, errors went undetected, and findings couldn't be compared or presented to leadership with confidence.
- Collected and cleaned data using **Python (Pandas)** and **SQL**; performed **EDA** to identify trends and anomalies; applied **statistical analysis** including hypothesis testing and regression; built **Plotly** dashboards surfacing data quality and performance trends; wrote clear reports and documentation for faculty and stakeholders.
- **30% fewer errors**, **25% faster** review cycles – faculty had reliable, well-documented findings they could act on and present with confidence.

Tata Consultancy Services

Jan 2024 – May 2024

Data Analyst Intern

Gandhinagar, India

- **500K+ operational records** had no analytical framework – business teams couldn't get timely answers from their data, a hidden error had been making key metrics wrong for weeks, and reports were produced manually with no consistent methodology.
- Wrote advanced **SQL** queries to extract and transform data; cleaned and analyzed records using **Python (Pandas)**; performed **statistical analysis** to surface trends; built automated **Excel** and **Power BI** reporting workflows; documented findings and delivered regular written briefings and presentations to business stakeholders.
- Reporting **15% faster**, data reliability improved **30%** – stakeholders could trust the numbers and make confident decisions, with every report backed by clear methodology documentation.

Celebal Technologies

May 2023 – Sept 2023

Business Intelligence Analyst Intern

Jaipur, India

- Three business teams were each measuring the same KPIs differently – **1M+ records** had inconsistencies nobody had caught, reports conflicted in leadership meetings, and analysts spent hours every week preparing the same reports manually.
- Cleaned and standardized data using **SQL** and **Python**; designed **Power BI** and **Tableau** dashboards with **DAX** measures on **SQL**-backed data models; built automated reporting workflows replacing manual exports; authored data dictionaries and KPI documentation adopted org-wide.
- Data accuracy **18% higher**, manual reporting workload down **25%** – everyone worked from the same reliable numbers, and leadership meetings shifted from arguing about data to making decisions.

PROJECTS

Business Performance and Revenue Dashboard · SQL · Python · Power BI · Tableau · DAX · Excel · Pandas

Dec 2025 – Mar 2026

- Leadership had no single place to see how the business was performing – data lived in separate systems, metrics were defined differently across teams, and reports took days to produce manually.
- Pulled and joined data from multiple sources using advanced **SQL**; cleaned and transformed records in **Python (Pandas)**; built interactive **Power BI** and **Tableau** dashboards with **DAX** measures tracking revenue, retention, and operational KPIs across **300K+ records**; created **Excel** pivot summaries for executives; documented all metric definitions and data sources.
- Manual reporting eliminated, analysis time reduced **40%** – leadership had a single, reliable view of business performance updated automatically, with every metric clearly defined and auditable.

Customer Trend and Segmentation Analysis · Python · SQL · scikit-learn · Tableau · A/B testing · statistical analysis

Apr – Jul 2025

- Marketing and product teams had no systematic understanding of customer behavior – **12K+ customer records** sat unused because nobody had the tools or process to turn them into actionable segments or recommendations.
- Performed **EDA** to identify behavioral patterns; applied **statistical segmentation** and **clustering** using **Python + scikit-learn**; validated findings with **A/B testing** and **hypothesis testing**; built **Tableau** dashboards visualizing segments and trends; wrote a clear written report with business recommendations for product and marketing leadership.
- **4 distinct customer segments** identified and documented, manual analysis effort reduced **35%** – teams had a data-backed segmentation framework they could use to personalize campaigns and prioritize product improvements.

Automated Reporting and Data Quality System · Python · SQL · Apache Airflow · AWS · Power BI · Excel · Git

Mar – May 2024

- **1M+ records** from multiple departments were never validated – analysts were spending more time fixing data problems than doing analysis, and there was no automated process to catch errors before they reached reports.
- Built automated **data quality checks** and **ETL workflows** using **Python + SQL** and **Apache Airflow** on **AWS**; designed **Power BI** dashboards with automated refresh; built **Excel** summary reports for non-technical stakeholders; documented all data flows, transformation rules, and metric definitions in **Git**-versioned specs.
- Data reliability **30% higher**, reporting pipeline **35% faster** – analysts spent time on analysis instead of data fixing, and every report was backed by validated, documented data.

EDUCATION

University of Texas, Arlington

Aug 2024 – May 2026

M.S. Computer Science **GPA: 3.90/4.00** · Data Mining · Statistics & Probability · Machine Learning · Algorithms

Arlington, TX

Charusat University

Oct 2020 – May 2024

B.S. Computer Engineering **GPA: 3.78/4.00** · Database Systems · Business Analytics · Probability & Statistics

India

SKILLS

Query Languages: SQL (advanced) · MySQL · PostgreSQL · Google BigQuery · Snowflake · Microsoft SQL Server · Oracle SQL (familiar)

Programming: Python (advanced) · R (familiar) · Pandas · NumPy · Bash

Spreadsheets: Excel (advanced) · pivot tables · VLOOKUP · Power Query · Power Pivot · Google Sheets

Visualization & BI: Power BI (advanced) · Tableau · DAX · Looker (familiar) · Google Data Studio (familiar) · Plotly · Matplotlib · Seaborn

Statistics & Analysis: Hypothesis testing · A/B testing · regression analysis · confidence intervals · p-values · EDA · trend analysis · forecasting

Data Management: Data cleaning · data validation · ETL pipelines · data dictionaries · data governance · schema design · data quality frameworks

Reporting: KPI dashboards · executive reporting · ad hoc analysis · automated reporting · data storytelling · written business reports

Cloud & Tools: AWS (S3, EC2) · Google Cloud (BigQuery) · Azure (Data Factory – familiar) · Apache Airflow · Docker · Git

Collaboration: Agile · SDLC documentation · stakeholder communication · cross-functional teamwork · presentation skills · Microsoft Office
