Jay Shah

Data Scientist | AI/ML Engineer | Generative AI, RAG & Agentic Systems

(972) 827-8576 | shahjay301980@gmail.com | LinkedIn | GitHub | Portfolio

Dear Hiring Manager,

I am writing to apply for Data Scientist opportunities on your team. With five years of experience building and deploying machine learning and generative AI systems across healthcare, banking, and insurance, I bring the full path from data pipelines and model development to secure, monitored production services. I am especially interested in teams applying generative AI to real-world problems where reliability, security, and measurable impact matter.

At Komodo Health, I build enterprise RAG and agentic AI systems for healthcare automation using OpenAI, Claude, Gemini, LangChain, LangGraph, CrewAI, and AutoGen. My RAG pipelines run across more than 2 million patient records and 500,000 research documents, and I brought the hallucination rate below 3%. I also fine-tuned LLaMA2 (70B) with LoRA/QLoRA, RLHF, and DPO, which cut inference cost by 60% while improving task performance. Because this work touches sensitive data, I deploy every service with HIPAA-aware controls, including IAM, OAuth2, RBAC, and encryption, and I work closely with data scientists, product managers, and clinical stakeholders.

Before Komodo Health, I was a Data Scientist at Jupiter, where I built RAG-based chatbots on GPT-3.5, LLaMA2, and a PostgreSQL vector store, and served models through FastAPI, Azure Kubernetes Service, and SageMaker endpoints. I automated CI/CD and model monitoring with Jenkins, MLflow, and SageMaker Pipelines, which shortened deployment time and improved lifecycle management. Earlier, at Generali Central Life Insurance, I delivered forecasting, credit risk, churn, and anomaly detection models on Spark, Kafka, and GCP, with MLOps workflows covering drift detection and retraining.

I would bring to your team a strong foundation in LLMOps and evaluation (RAGAS, DeepEval, LangSmith), hands-on experience across AWS, Azure, and GCP, and a habit of shipping systems that are reliable, explainable, and cost-aware.

I would welcome the chance to discuss how my experience can support your team. Thank you for your time and consideration.

Sincerely,

Jay Shah
